

Mission Statement, Goals, and Student Learning Outcomes

The mission of the Radiography Program is to prepare entry level radiographers with the knowledge and skills to competently and safely perform diagnostic radiologic imaging procedures fulfilling the needs of the medical community in the service area.

Goal 1:

Students will competently perform radiologic imaging procedures on patients while also maintaining radiation safety.

Outcomes:

1. Students will competently position patients.
2. Students will use collimation.

Goal 2:

Students will communicate effectively.

Outcomes:

1. Students will use effective oral communication skills in the performance of procedures.
2. Students will practice written communication skills

Goal 3:

Students will apply critical thinking skills.

Outcomes:

1. Students will modify exams based on the patient.
2. Students will feel confident in applying critical thinking skills during medical emergencies.

Goal 4:

Students will demonstrate the importance of professional growth and development.

Outcomes:

1. Students will become a member of a professional organization associated with Radiologic Technology.
2. Students will feel prepared for graduation.
