

SOUTHERN UNION

STATE COMMUNITY COLLEGE

Concurrent Enrollment Agreement to Reverse Transfer

The majority of the concurrent enrollment degree pathways meet the requirements of an Associate in Science degree. Students will be awarded an associate degree upon completing the requirements of the degree. In rare circumstances, a student may transfer to a four-year university before completing all of the requirements of the Associate in Science degree. Reverse transfer is a process where academic credits for course work completed at a four-year university are transferred back to the previously-attended community college to satisfy associate degree requirements.

By signing below, I agree and commit to give written consent and authorize the following institution, upon transfer as a full-time student, to release my academic record to Southern Union State Community College for purposes of credit evaluation. I understand that I must follow the procedures of the following institution to ensure that my transcript is released to Southern Union State Community College to determine the awarding of an associate degree.
